Figures 4, 5A, and 5B should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Suchy. Suchy shows a pressure reducing valve with a piston 11 dividing the housing into a primary pressure chamber 5 and secondary chamber 13. The piston is biased open. Back pressure receiving area 21 is formed by the piston and rod 16, and allows primary pressure to be applied to a back face of the piston. The back face area is equal to the seat area 4.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Karenfeld and Krichbaum show regulators where primary pressure is balanced by opposed piston faces.
